

MATH11100 HOMEWORK GUIDE

The expectation is that you will understand and be able to work every problem of every section covered in Math11100 this semester. This Homework Guide is provided to assist you in identifying where emphasis should be placed when completing your assignments. Problems similar to those found in the graded MathXL assignments and those on quizzes, problem sets, and/or exams are among these exercises. Frequently students find that they are able to complete exercises in MathXL by using the online tutorial to assist them, but when they attempt to work similar problems from the textbook, they are unable to work the problem correctly. For this reason, you should find that the textbook exercises will better prepare you for quizzes and exams in this course. You should plan to spend a couple of hours each day working exercises from the textbook and checking your solutions manual for accuracy. Above all else, **DO NOT FALL BEHIND IN MATH11100**. If you are experiencing difficulty in working through the problems of your homework, **MAKE TIME** to visit the MAC, get in to see your instructor, and/or meet with other members of your class in a study group. It is **YOUR RESPONSIBILITY** to know how to work each and every problem from each section covered this semester in Math11100 and there is little time to answer questions during the lecture period.
